PROOF LIBRARY · ENGLISH NAVIGATION

Complete mathematical proof library

Open the complete 1,406-page M0–M6c corpus, the article-specific 24-page proofs, and the relevant theorem pages without digging through menus.

THE DOCUMENT YOU ARE LOOKING FOR

The full M0–M6c technical volume — 1,406 pages

The original file has not been removed. It preserves 64 source documents, their theorems and appendices, with 486 navigation markers. The source text is predominantly in French.

Direct access to all seven chapters

Each link opens the source PDF at its specified page. If your PDF viewer ignores #page links, use the volume’s built-in bookmarks.

M0 · page 10

Maternal renewal and stationary baseline

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 10 ↗

M1 · page 44

Historical demography and ancestral depth

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 44 ↗

M2 · page 146

Weighted mother selection and collisions

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 146 ↗

M3 · page 212

Geography, migration and coalescence

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 212 ↗

M4 · page 480

Ancestral partitions and multiple lineages

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 480 ↗

M5 · page 865

Dispersion, extremes and error controls

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 865 ↗

M6a–M6c · page 1034

Historical input and calibration contracts

Source text and detailed assumptions in the original PDF; source passages predominantly in French.

Jump to page 1034 ↗

And the proofs specific to the paper?

Important: several results introduced in V0.6 were not present in the original M0–M6c chapters. Their proofs are in the 24-page English mathematical manuscript, which is essential for verifying the reader’s articles.

V0.6 proof · p. 7

Two lineages: stopping at their first shared ancestor

Mathematical proof specific to V0.6, originally written in English.

Read proof p. 7 ↗

V0.6 proof · p. 9

Finite historical epochs / Cox mixing

Mathematical proof specific to V0.6, originally written in English.

Read proof p. 9 ↗

V0.6 proof · p. 13

Dependence among descendant groups

Mathematical proof specific to V0.6, originally written in English.

Read proof p. 13 ↗

V0.6 proof · p. 14

Simultaneous depth bounds

Mathematical proof specific to V0.6, originally written in English.

Read proof p. 14 ↗

V0.6 proof · p. 16

Expected cohort-wide mean gap

Mathematical proof specific to V0.6, originally written in English.

Read proof p. 16 ↗

V0.6 proof · p. 19

Conditions for historical calibration

Mathematical proof specific to V0.6, originally written in English.

Read proof p. 19 ↗

Both articles in both languages

> **Language and proof transparency.** Both navigation interfaces and reader articles exist in French and English. However, a complete certified English translation of the 1,406-page corpus and a complete certified French translation of the 24-page V0.6 proof manuscript do not currently exist. The unchanged original PDFs are accessible in both language interfaces; we do not mislabel them as translated.

Scientific status: mathematical working preprint, not peer reviewed; the fully general historical M4–M5 model is not certified.
